Github Linkedin Portfolio

Profile

Software Development Engineer (SDE) aspirant targeting backend and full-stack roles with strong foundations in Data Structures, Algorithms, and Object-Oriented Programming (200+ problems solved). Experienced in building scalable MERN applications, designing RESTful APIs, and developing automation systems. Passionate about writing efficient, maintainable code and solving real-world engineering problems.

Education

Bachelor of Technology, Information Technology 2023 – 2027
Bhagwan Parshuram Institute of Technology, New Delhi
CGPA: 8.5

Technical Skills

Programming Languages:	JavaScript, C++, Java, Python
Frontend:	React.js, Redux Toolkit, HTML5, CSS3, Tailwind CSS, Bootstrap
Backend:	Node.js, Express.js, RESTful APIs, Caching, Redis, Async Programming
Databases:	MongoDB, MySQL (Schema Design, Indexing, Query Optimization)
AI & System Design:	Multi-Agent Systems, RAG Pipelines, Large Language Models (LLMs), Prompt Engineering, Generative AI
Security & Integrations:	JWT Authentication, Bcrypt, Role-Based Access Control (RBAC), API Integration, Cloudinary, Multer, Nodemailer
Deployment & DevOps:	Vercel, Render, Environment Configuration, Production Deployment, DNS & SSL Setup
Core CS Concepts:	Data Structures, Algorithms, OOPS, DBMS, Operating Systems, Time & Space Complexity
Tools:	Git, GitHub, VS Code, Postman, GitHub Copilot

Professional Experience

Frontend Developer Intern — Coding Bits — Link June 2025 – July 2025 — New Delhi, IN

- Developed scalable React components with optimized routing and modular state management
- Implemented EmailJS-based automation for dynamic form handling and notifications
- Enhanced performance, maintainability, and collaboration using reusable architecture and Git workflows

Software Developer Intern — WinproFX April 2026

- Developed a secure multi-step broker onboarding and integration flow using React.js, TypeScript, React Router DOM, and Tailwind CSS, enabling seamless connection with trading platforms like Exness and WinProFX.
- Engineered scalable and reusable UI components including accessible dropdowns, interactive image sliders, and animated status modals, improving user experience and frontend performance.
- Implemented complex state management, route protection, asynchronous verification flows, and secure environment variable handling using React Hooks and Vite, ensuring smooth navigation and secure authentication workflows.

Projects

SoftwareHealth — AI-Powered Project Cost and Effort Estimator — Demo

- Built an AI-powered project estimator to predict cost, effort, and risks using ML models and multi-agent architecture
- Developed a full-stack application (FastAPI, React, MongoDB) with automated code analysis and project planning features
- Implemented GitHub repo analysis + interactive dashboards to visualize complexity metrics, timelines, and risk insights

EmailAutomate — Python, Gmail API — GitHub

- Developed an automated bank statement processing system using Python and Gmail API, reducing manual effort by ˜90–95% (from 3 hours to 10–15 minutes) through intelligent email parsing and document automation.
- Implemented scalable background automation with bank detection, duplicate prevention using hashing, scheduling, and structured logging, improving data accuracy and ensuring continuous monitoring.

Freelance Full-Stack Developer — Link Nov 2025 – Jan 2026 — Kolkata, IN
Dasgupta Maiti and Associates

- Designed and developed a secure full-stack MERN application with modular backend architecture, RESTful APIs, and JWT-based authentication with role-based access control.
- Integrated Cloudinary for optimized media management and Nodemailer for automated email workflows, while deploying a production-ready application with performance optimization and environment configuration.

Currently Learning

Strong foundation in Advanced Data Structures, System Design, Generative AI and LLMs, and Agentic AI applications, with a focus on scalable backend systems and distributed architectures.
